Instructions for Use

1️⃣ At the conclusion of the four-phase test, review the participant's recorded impressions against the practitioner's actual chip selections.
2️⃣ Count the number of correct impressions across the four phases.
3️⃣ Refer to the classification scale on the document:

1 Correct = Baseline (No Action)

2 Correct = Potential Receptor (Monitor)

3 Correct = High Perceptibility (Recommend Follow-Up)

4 Correct = Subject of Interest (Further Scrutiny)

4️⃣ Verbally inform the participant of their classification if appropriate to the testing context.

5️⃣ Record the classification in the participant's observation file.

6️⃣ For "Subject of Interest" classifications, notify your immediate supervisor for guidance on next steps.

Optional Closing Statement

If conditions allow, you may use the provided statement for closure with the participant:

"Under Stargate protocols, your results would determine if you were flagged for further testing. Based on today's session, your classification is: [state classification]. Thank you for participating in this classified simulation."

Operational Note
Maintain a calm, objective demeanour throughout to preserve protocol integrity.

Adjust pacing based on the participant's comfort and mental readiness.

Optional: Have the participant sign and date their observation log for formal file closure.

If using in a civilian testing scenario, conclude with a brief reveal of the practitioner's chosen chip colour to reinforce credibility and the participant's perceived alignment.

For any questions regarding the use of the RESULT CLASSIFICATION document or its integration into your current testing workflow, contact [Stargate Project Liaison Officer Name].
